Art Unit: 1792

1. The amendment filed 11/16/09 has been considered and entered. Claims 1-19 have been canceled. Claims 20-22 remain in the application.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. In light of the amendment filed 11/16/09, the 35 USC 103 rejection over JP 11-163,499 has been withdrawn. However, the following rejection has been necessitated by the amendment. The 35 USC 112 rejection has also been withdrawn.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

***Claim Rejections - 35 USC § 103***

6. Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furusawa et al. (7,285,305).

Furusawa et al. (7,285,305) teaches a multilayered wiring board and method of producing the multilayered wiring board. Furusawa et al. (7,285,305) teaches polyamide insulating layers (22) between the wiring layers and an interlayer conducting post (18) for conducting between wiring pattern (17) and the wiring pattern (31) wherein the insulating layer is disposed around the conducting post (18) using a liquid drop discharge system (abstract). Looking at the Figs, conductive wirings (17) are formed with conductive posts (18) and then insulating layer is formed surround the posts (18). Then wiring layers (31) and posts (32) are formed that connect to the wiring layer (17) and insulating layer (33) is applied to surround the post (32).

Furusawa et al. (7,285,305) fails to teach first forming the insulating portion of the first layer and then the conductive layer but teaches the reverse of this process.

While the Examiner acknowledges the fact that the claimed invention teaches process steps of forming the conductor and then insulator patterns as opposed to forming the insulator and then conductive patterns, it is the Examiner's position that one skilled in the art at the time the invention was made would have had a reasonable expectation of achieving similar success

regardless of which layer was applied first and which layer was applied subsequently as long as both conductive and insulative layers are formed within the same layer as claimed.
